

You visit the camp clinic and are told that post-exposure prophylaxis and emergency contraception are not available. The closest post-rape care is in the district hospital. This is a problem because the district hospital is one day away and refugees require a permit to move outside the camp. Additionally, your NGO does not have funds for transportation and your only vehicle is broken.

The UNHCR Community Services Officer says he will help you to obtain a permit to leave the camp, but to do so he first needs you to complete an incident report that will be annexed to the movement slip. He asks that you bring back a copy of the medical exam so that he can present this information to his supervisor or the government authority if they ask for justification.

At the district-level hospital you are told that PEP and EC will cost eight dollars, which is more than Fatima has available. According to policy, refugees should not pay for medical services. When you point this out, though, the hospital staff says it isn't right to implement different standards for payment between nationals, who are very poor, and refugees, who receive all sorts of services.
